Scrum I

The framework, the pillars, the roles

Monday, October 5, 2026 · Sprint 0 · Week 3

3 accountabilities

5 events

3 artifacts

Cyber.SoHo Educational Hub

Schiller International University

OVERVIEW

Today's hour, minute by minute

- **0–2 min** · Check-in
- **2–12 min** · Lesson 1 · Origins + 3·5·3
- **12–17 min** · Activity 1 · Label the cycle
- **17–27 min** · Lesson 2 · Empiricism
- **27–32 min** · Activity 2 · Flash-cards ×8
- **32–42 min** · Lesson 3 · Product Owner + Scrum Master
- **42–47 min** · Activity 3 · Fun-quiz ×4
- **47–57 min** · Lesson 4 · Developers + Scrum Team
- **57–60 min** · Activity 4 · Zen-break + improv

Legend: ■ lessons (teal) ■ activities (rust) ■ check-in (grey)

LEARNING OUTCOMES

Today you will be able to…

1. Tell the history of Scrum with dates, names and sources: 1986 → 1993 → 1995 → 2001 → 2010 → 2016 → 2020.

2. Draw the Scrum framework on one page: 3 accountabilities, 5 events, 3 artifacts and the commitment of each artifact.

3. Define **empiricism**, explain why each of the three pillars makes the next one possible, and give one observable behaviour for each of the five values.

4. State what the **Product Owner** and the **Scrum Master** are each accountable for, who decides what, and recognize the common anti-patterns.

5. Describe the **Developers** and the **Scrum Team**: cross-functional, self-managing, typically 10 or fewer; compute the communication paths of a team.

LESSON 1 · 0:02 – 0:12

1

Where Scrum comes from — and the whole framework on one page

By the end of this lesson you can:

- Read the one-sentence definition of Scrum and explain each of its words.
- Place six dates of Scrum's history on a timeline, with names and sources.
- Draw the framework as 3 · 5 · 3: accountabilities, events, artifacts and their commitments.

What Scrum is, in one sentence

> Scrum is a **lightweight framework** that helps people, teams and organizations generate **value** through **adaptive solutions** for **complex problems**.
>
> — *Ken Schwaber & Jeff Sutherland, **The Scrum Guide 2020***

- The Agile Manifesto (Class 2) says what to **prefer**.
- Scrum says **how a team organizes its work** so that it can live those preferences.

Every word counts (1/2)

1 Lightweight

- Very few rules
- The whole official text — the Scrum Guide — is about **13 pages**
- Project-management standards: several hundred pages

2 Framework

- A **minimal set of mandatory elements** that a team completes with its own practices
- Mandatory: 3 accountabilities, 5 events, 3 artifacts
- Example: a Daily Scrum of max. 15 minutes — but the Guide does not say which questions are asked
- “Purposefully incomplete”

Every word counts (2/2)

€ Value

- The benefit the product creates for its users and for the organization
- Team Menu: minutes saved at the counter, allergic reactions avoided — **not** the number of screens

↻ Adaptive solutions

- Solutions that are **changed as soon as new information shows they should be**

? Complex problem

- Requirements and means are **not fully known** at the start
- The result of a decision is known only after it has been tried
- Example: which features will students actually use?

Where Scrum comes from (1/2)

1986

Takeuchi & Nonaka describe one team working through overlapping phases — **Harvard Business Review**

They contrasted a sequential organization of the work (each group of specialists finishes its phase and hands the…

1993

Jeff Sutherland's team at Easel Corporation: the first Scrum team in software — **InfoQ**

The first Scrum team in software.

1995

Ken Schwaber & Jeff Sutherland present Scrum at **OOPSLA** (Object-Oriented Programming, Systems, Languages & Applications) '95 — **paper**

First public description of Scrum for software, and the origin of its empirical theory (Lesson 2).

2001

Both are among the 17 authors of the **Agile Manifesto**

Scrum becomes one of the frameworks that put the Manifesto into practice.

Where Scrum comes from (2/2)

2010

The first **Scrum Guide**: the official, free definition — **revisions**

From now on, "Scrum" means what the Guide says. Revisions follow in 2011, 2013, 2016, 2017 and 2020.

2016

The Guide adds the **five values**: commitment, focus, openness, respect, courage

The values describe the behaviour that makes the framework work (Lesson 2).

2020

Nov 18, 2020: the current edition, shorter and for any field — **The Scrum Guide**

One Scrum Team instead of a team inside a team; Developers; self-managing; a new Product Goal; one commitment per…

The whole framework on one page: 3 · 5 · 3

3 accountabilities

- Product Owner
- Scrum Master
- Developers

5 events

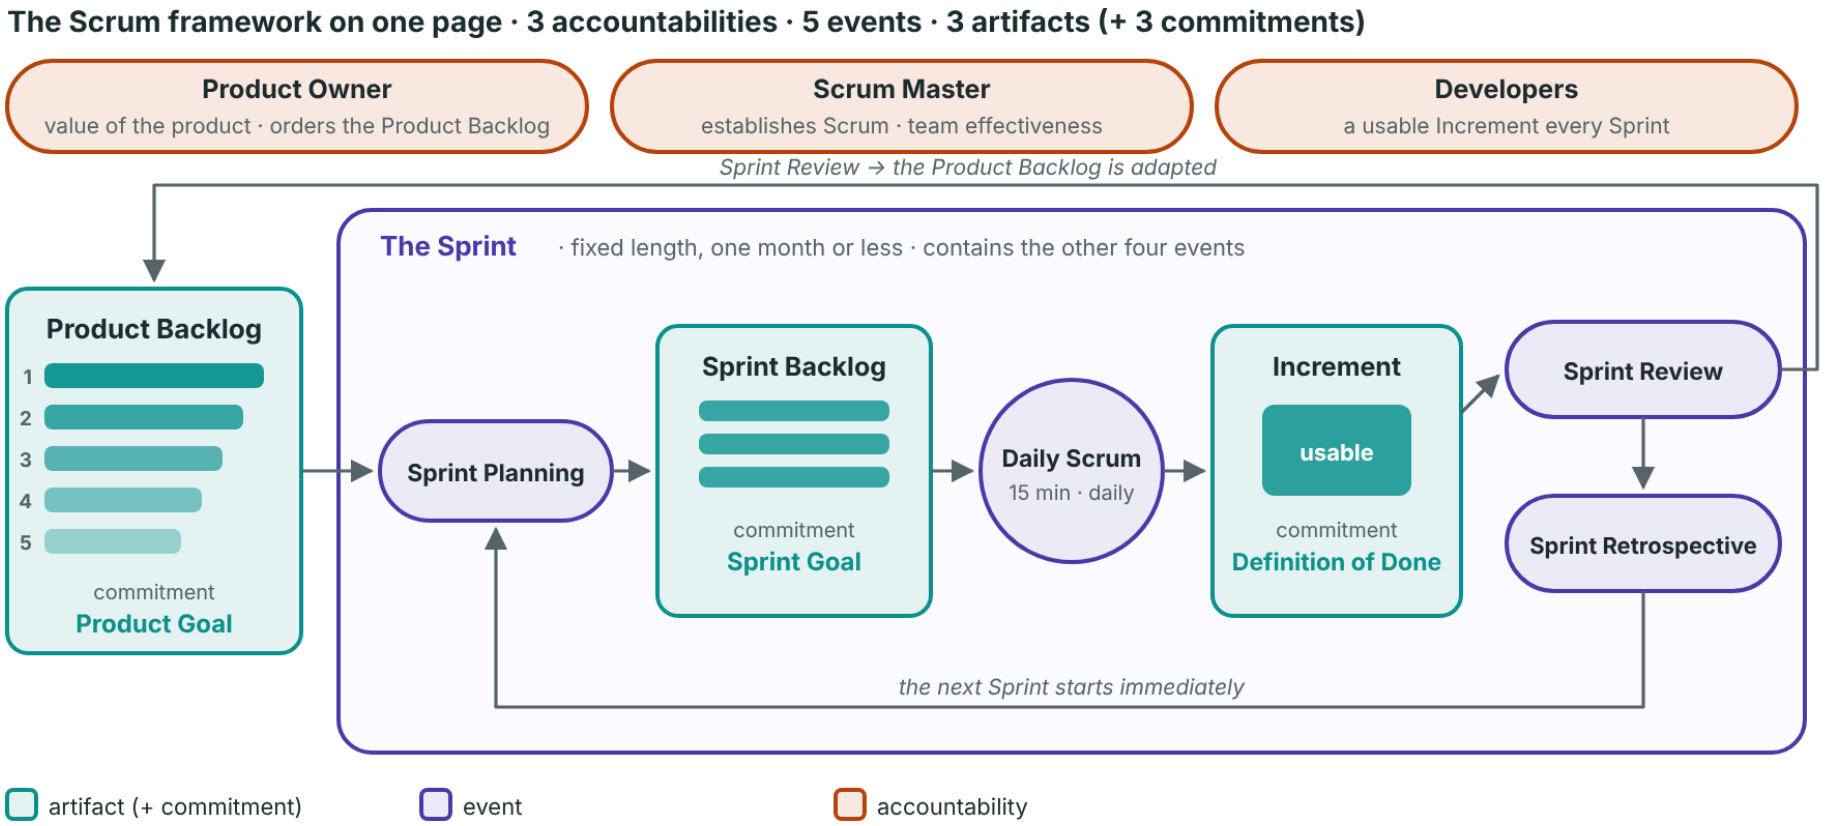

- The Sprint (contains the other four)
- Sprint Planning
- Daily Scrum (15 min)
- Sprint Review
- Sprint Retrospective

3 artifacts + commitments

- Product Backlog → **Product Goal**
- Sprint Backlog → **Sprint Goal**
- Increment → **Definition of Done**

Diagram 1 · the Scrum framework on one page

Source: The Scrum Guide 2020 (Schwaber & Sutherland, CC BY-SA 4.0) · Cyber.SoHo · DIG 123 · Class 3

Left to right: Product Backlog → Planning → Sprint Backlog → Daily Scrum → Increment → Review → Retrospective.

Roles or accountabilities?

R

A role

- A **title** on a badge
- Says who you are

A

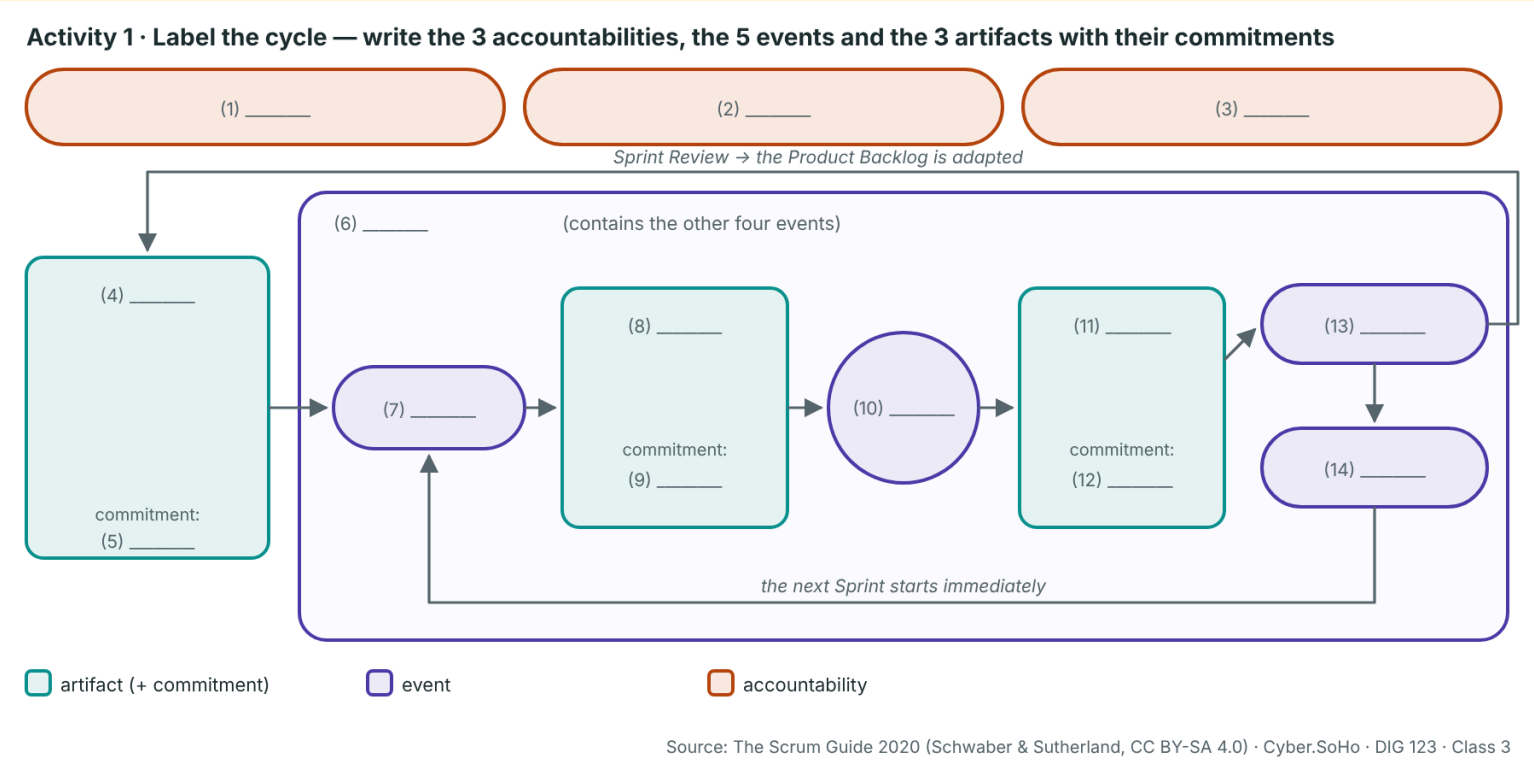

An accountability

- A **result** one person must answer for
- What Scrum cares about

Your role cards in **D3** (Deliverable 3, Scrum Team Charter) must state the result each person answers for.

0:12 – 0:17 · 5 MINUTES

Activity 1 · Label the cycle

- **2 min** alone, no notes
- **2 min** with your neighbour — disagree? Open the Scrum Guide together
- **1 min** two volunteers read their answers aloud
- Fill **14 blanks**: 3 accountabilities, 5 events, 3 artifacts, 3 commitments

Real-life example · Team Menu's timeline and map

1 · Scrum history timeline (mini-research for Deliverable 3)

2 · Sprint 1 of Team Menu on the Scrum framework (3 · 5 · 3)

3 accountabilities

Product Owner
Amira
maximizes the value of the allergen page; orders the Product Backlog

Scrum Master
Noah
establishes Scrum in the team; causes the removal of impediments

Developers
Sofia, Karim (and Amira, Noah)
create a usable Increment every Sprint, ready to be shown at the Review

5 events

The Sprint
Oct 12 → Oct 25 · two weeks

Sprint Planning
Mon Oct 12 · Team Studio · 30 min

Daily Scrum
Mon/Wed/Fri 18:00 · chat · 15 min max

Sprint Review
Sun Oct 25 · online, manager invited

Sprint Retrospective
Sun Oct 25 · right after the Review

3 artifacts → commitment

Product Backlog → Product Goal
Every student can check the allergens of every hot meal in the main cafeteria before lining up.

Sprint Backlog → Sprint Goal
A student can see the allergens of today's three hot meals on one phone-friendly page.

Increment → Definition of Done
Each entry checked against the kitchen's recipe card by a second member; readable on a phone.

- **The task:** Team Menu prepares two parts of **D3** (Deliverable 3, Scrum Team Charter)
- A **Scrum history timeline**: max. 30 words per milestone, each with a secure source
- A one-page **3 · 5 · 3 map** of its own Sprint 1
- The code **checks** each milestone and repairs the one without a source

LESSON 2 · 0:17 – 0:27

2

Empiricism: the three pillars and the five values

By the end of this lesson you can:

- Distinguish defined process control from empirical process control.
- Explain transparency, inspection and adaptation, and why each makes the next possible.
- Name the five Scrum values and turn each into an observable behaviour.

Two ways to keep work under control

Defined process control

- Every step is **known in advance**
- Same inputs → **same outputs**
- Plan once, repeat
- Example: a production line

Empirical process control

- Steps and results **cannot be fully predicted**
- Decide from **what is observed**
- Short cycles of inspect and adapt
- Schwaber (1995): software is “an unpredictable, complicated process”

Scrum chooses the **empirical** family — and everything else follows from that choice.

Empiricism and lean thinking

"**Empiricism** asserts that knowledge comes from experience and making decisions based on what is observed. **Lean thinking** reduces waste and focuses on the essentials."

— The Scrum Guide 2020

↻ Iterative

- The **same cycle is repeated** — Sprint after Sprint

+ Incremental

- Each cycle **adds a usable piece** of product

A wrong assumption: how many days are built on it?

10

working days built on the error
with two-week Sprints (first Review)

120

working days built on the error
with a six-month plan tested at the end

Class 2: the cost of a change grows with the amount of work that depends on it. **A short loop keeps that amount small.**

The three pillars of empiricism

1 Transparency

The process and the work must be visible to those who perform it and to those who receive it.

Team Menu: One shared board (To do · Doing · Done) that the cafeteria manager can open; every allergen entry shows who checked it and when.

2 Inspection

The artifacts and the progress toward the agreed goals are inspected frequently and diligently, to detect undesirable variances.

Team Menu: Every Friday, a second member compares each published entry with the kitchen's recipe card.

3 Adaptation

When something deviates outside acceptable limits, or the product is unacceptable, the process or the product is adjusted as soon as possible.

Team Menu: Three wrong entries found on Friday → from Monday, a second person checks every entry before it is published.

Each pillar makes the next one possible

- Without **transparency**, inspection is “misleading and wasteful” (Scrum Guide)
- Without **inspection**, nobody knows what to adapt
- Without **adaptation**, inspection is only an observation — the error keeps coming back
- Adaptation needs **people who are allowed to change** the process

Inspection needs a reference: the acceptable limit

0

wrong allergen entries may reach a student — the limit agreed with the cafeteria manager

- **Acceptable limit**: a measurable tolerance **agreed in advance**
- **Deviation**: a measured result **outside** the limit
- Without a stated limit, an inspection cannot tell a deviation from normal variation
- Limit exceeded → **adapt the process** as soon as possible

The five Scrum values (since 2016)

Commitment

The team commits to achieving its goals and to supporting each other.

We… take into a Sprint only what we believe we can finish, and we help a teammate who is stuck before starting new work.

Focus

The primary focus is the work of the Sprint, to make the best possible progress toward the goals.

We… One Sprint Goal at a time; phones face down during the Daily Scrum.

Openness

The team and its stakeholders are open about the work and the challenges.

We… write "I am blocked" in the team chat on the day it happens.

Respect

Members respect each other as capable, independent people, and are respected as such by the people they work with.

We… decide with the rule written in our charter; nobody's estimate is laughed at.

Courage

Members have the courage to do the right thing and to work on tough problems.

We… show the cafeteria manager a wrong result at the Review instead of hiding it.

0:27 – 0:32 · 5 MINUTES

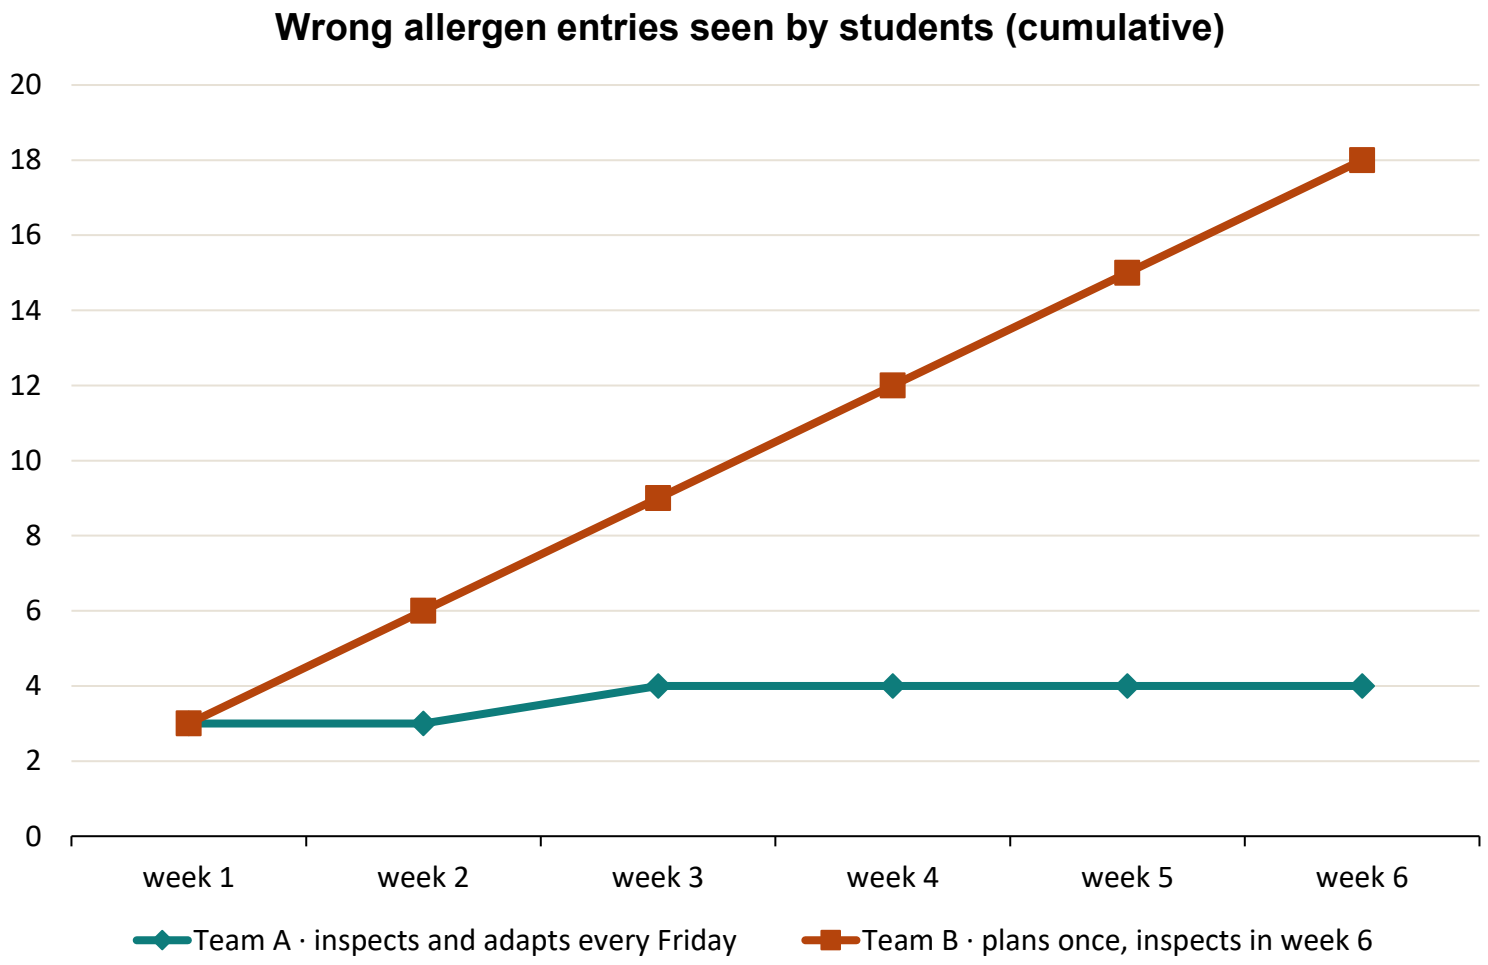

Activity 2 · Flash-cards ×8, call and response

Transparency	**Inspection**	**Adaptation**	**Commitment**
Focus	**Openness**	**Respect**	**Courage**

Round 1 in order · Round 2 shuffled · Round 3 “give me an example from your team” — teal = pillars, indigo = values

Real-life example · six weeks, two teams

4

Team A · empirical

wrong entries in 6 weeks

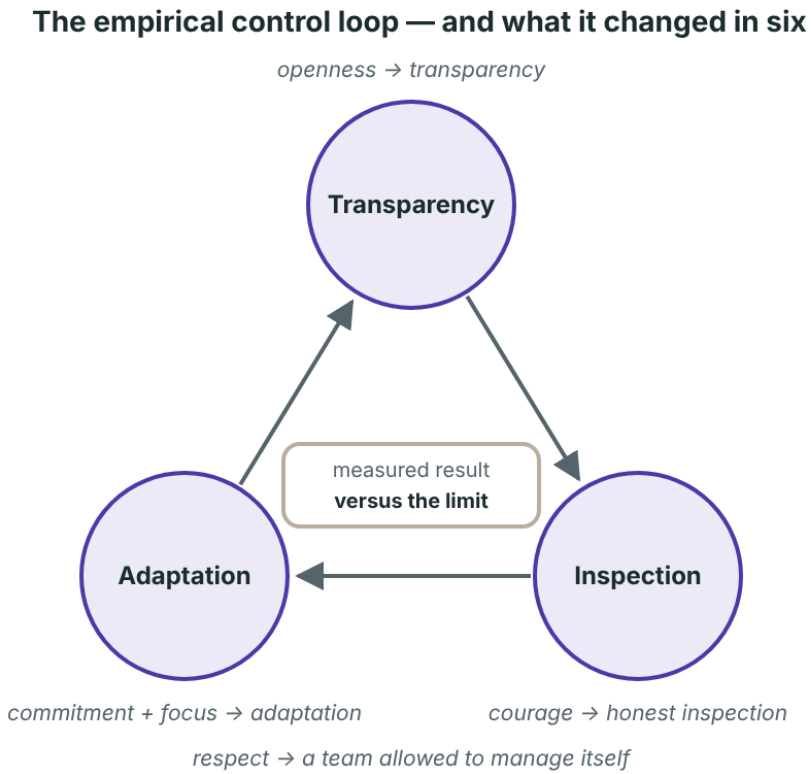

18

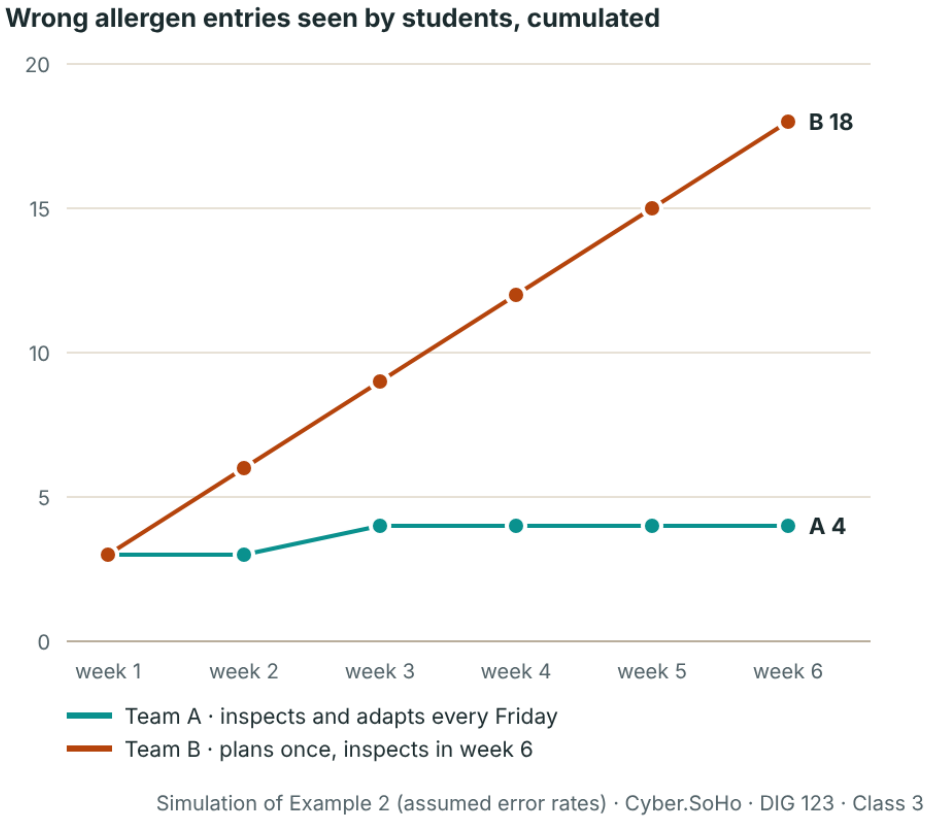

Team B · defined

wrong entries in 6 weeks

14 errors avoided by inspecting and adapting every week.

Diagram 2 · the empirical loop and six weeks of results

Left: the loop and the values that carry it. Right: cumulative wrong entries, Team A vs Team B (simulation with assumed error rates).

LESSON 3 · 0:32 – 0:42

3

The Product Owner and the Scrum Master

By the end of this lesson you can:

- State what the Product Owner is accountable for, and how a Product Backlog is ordered.
- State what the Scrum Master is accountable for, and what "causing the removal of impediments" means.
- Say who decides what in a Scrum Team, and recognize the common anti-patterns.

The Product Owner: value, not output

> "The Product Owner is accountable for **maximizing the value of the product** resulting from the work of the Scrum Team."

Output

- The **amount produced**: screens, features, pages
- Easy to count — not the goal

Value

- The **effect** of that output on users and on the organization
- Team Menu: allergens checked **before** lining up

Product Backlog management: four parts

1. Developing and explicitly communicating the Product Goal — the long-term objective of the product, written in the Product Backlog (Team Menu's: every student can check the allergens of every hot…

2. Creating and clearly communicating Product Backlog items;

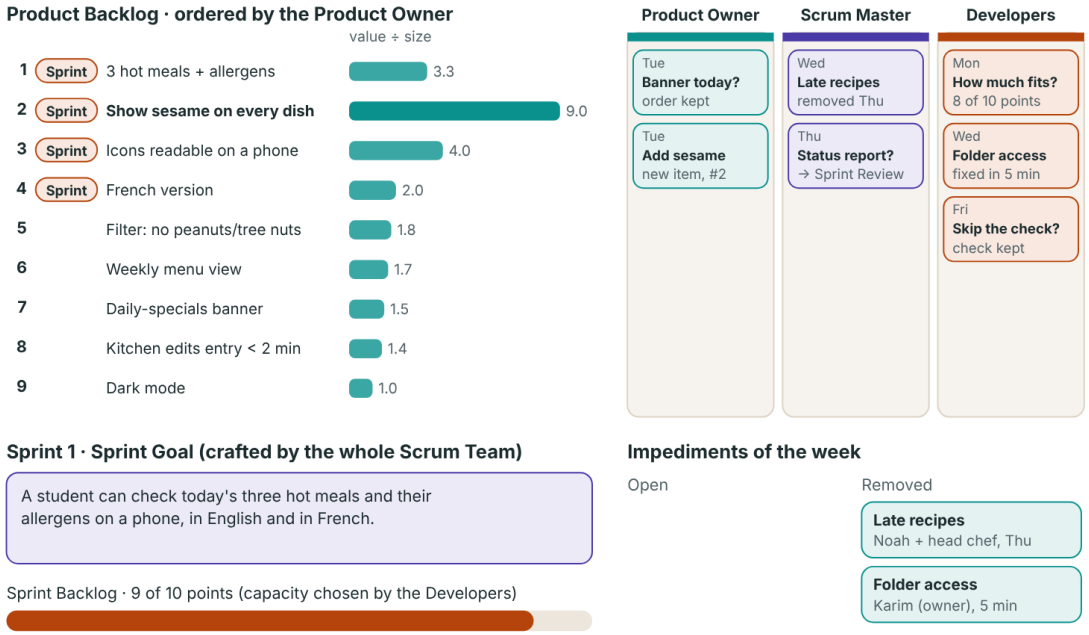

3. Ordering the Product Backlog items;

4. Ensuring that the Product Backlog is transparent, visible and understood.

Ordering the Product Backlog

- Ordering = **one sequence** — first, second, third — **no ties**
- The Guide imposes **no formula**
- The Product Owner weighs **value**, **size**, **risk** and **dependencies**
- A simple technique: **value ÷ size** (value per point)
- An item never comes before the item it **needs**

One person, not a committee · four anti-patterns

Stakeholders (cafeteria manager, students, kitchen staff) are affected by the product and influence it — the **Product Owner decides**.

✗ Absent

the team guesses the priorities

✗ Committee

five people order the backlog — nobody decides

✗ No authority

a proxy: every decision waits for someone outside the team

✗ Says how

tells the Developers how to do the work

The Scrum Master

Accountable for

- **Establishing Scrum** as defined in the Scrum Guide
- The **Scrum Team's effectiveness**

"True leaders who serve"

- Scrum Guide 2020
- Until 2017: **servant-leader** — from Greenleaf, 1970

- Leads by **teaching, coaching and removing obstacles** — not by giving orders
- Helps everyone in the team **and in the organization** understand the theory and the practice

The Scrum Master serves three groups

The scrum team

- Coaching self-management and cross-functionality
- Helping the team focus on high-value Increments that meet the Definition of Done
- Causing the removal of impediments
- Ensuring that every Scrum event takes place and is positive, productive and kept within its time-box.

The product owner

- Helping find techniques for defining the Product Goal and managing the Product Backlog
- Helping the team understand the need for clear, concise backlog items
- Helping establish empirical product planning
- Facilitating stakeholder collaboration.

The organization

- Leading, training and coaching its Scrum adoption
- Planning and advising implementations
- Helping employees and stakeholders understand and enact an empirical approach
- Removing barriers between stakeholders and Scrum Teams.

Impediments: “causes the removal”

Impediment: an obstacle to the team's progress that the **Developers cannot remove by themselves** in reasonable time.

Late recipes

Noah (Scrum Master) brings the head chef into the conversation → removed Thursday

Folder access

Karim owns the folder and fixes it in 5 minutes → the team removes it itself

Not a project manager · four anti-patterns

The Scrum Master does **not** assign tasks, decide scope, or report on individual performance.

✗ The boss

assigns tasks

✗ The secretary

only books rooms and writes minutes

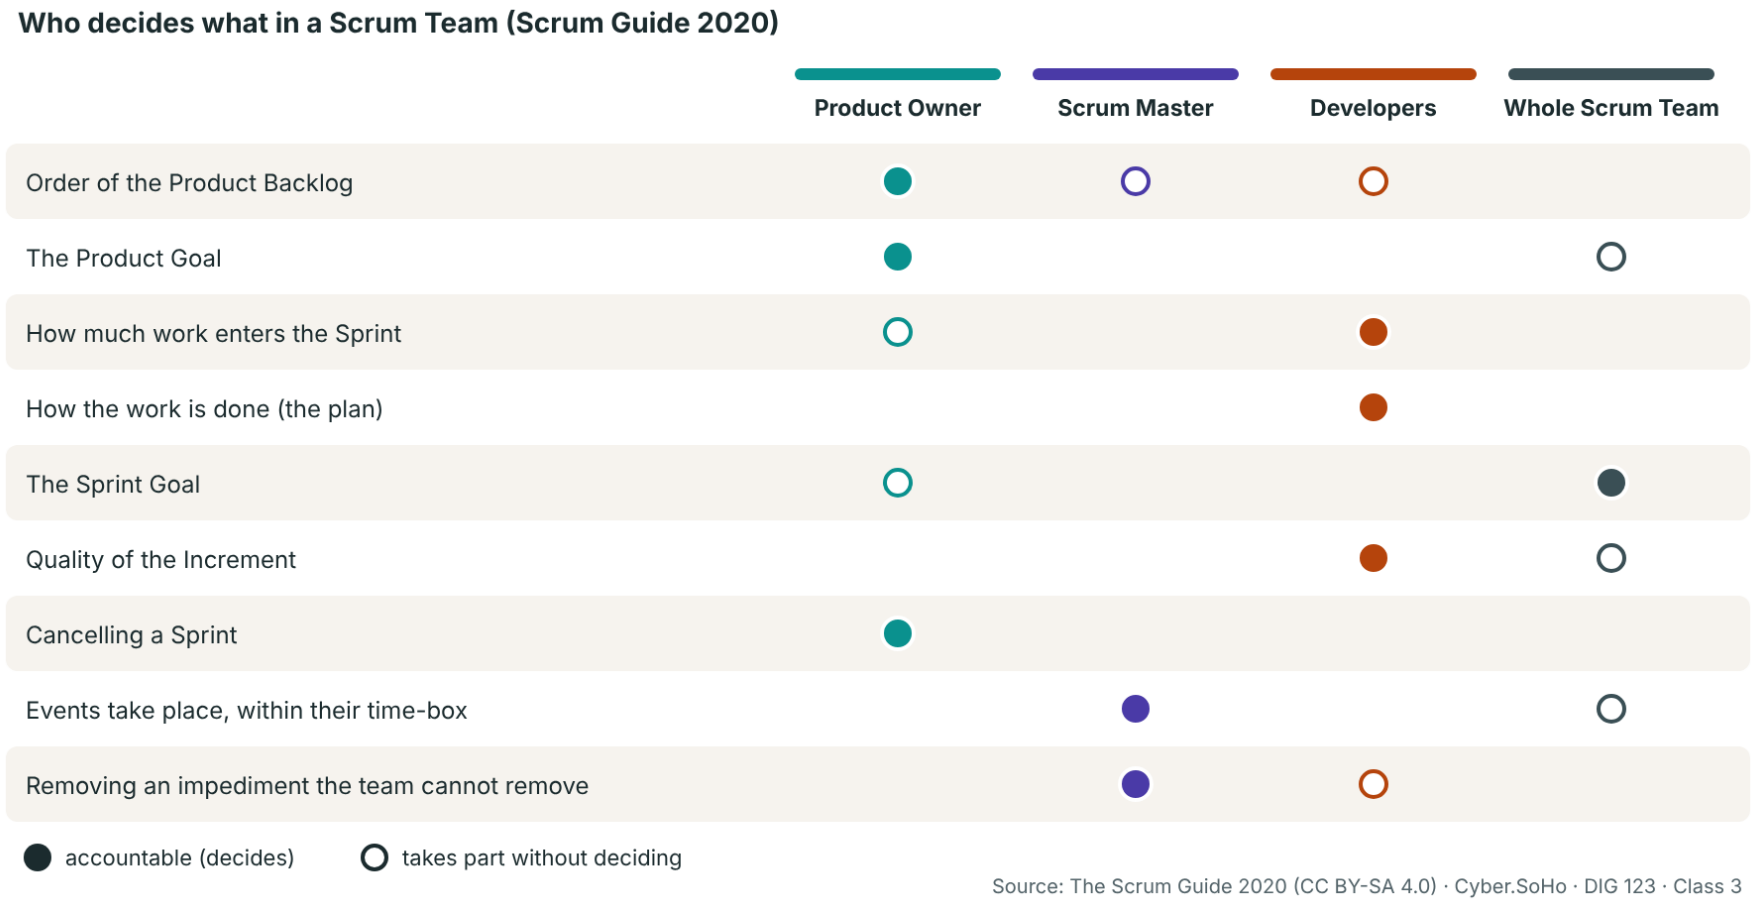

✗ The hero

solves every problem — the team never learns

✗ The absentee

is not there when needed

Diagram 3 · who decides what in a Scrum Team

● *accountable (decides)* · ○ *takes part without deciding — source: The Scrum Guide 2020.*

0:42 – 0:47 · 5 MINUTES

Activity 3 · Fun-quiz ×4 — who does what?

Q1 Who orders the Product Backlog?

Q2 The team cannot get a publishing permission from the campus **IT** (Information Technology) service desk. Who makes sure this blocker gets removed?

Q3 Who decides how much work to take into a Sprint?

Q4 Who owns the Sprint Goal?

FUN-QUIZ · REVEAL

Activity 3 · the answers

A1 The Product Owner — one person, not a committee.

A2 The Scrum Master — causes its removal (for example by bringing the right person into the conversation), without necessarily doing it personally.

A3 The Developers, in Sprint Planning, after discussion with the Product Owner.

A4 The whole Scrum Team: the Product Owner proposes why the Sprint is valuable, and the team defines the goal together and commits to it.

LESSON 4 · 0:47 – 0:57

4

The Developers and the Scrum Team

By the end of this lesson you can:

- Define the Developers and their four accountabilities.
- Explain cross-functional and self-managing, and test a team against them.
- Compute communication paths and explain the size rule "typically 10 or fewer".

One Scrum Team

"The Scrum Team consists of one Scrum Master, one Product Owner, and Developers. Within a Scrum Team, there are **no sub-teams or hierarchies**."

One team · one objective at a time: the **Product Goal**

The Developers

> "The people in the Scrum Team that are committed to creating **any aspect of a usable Increment** each Sprint."

1. Creating a plan for the Sprint — the Sprint Backlog
2. Instilling quality by adhering to a Definition of Done
3. Adapting their plan each day toward the Sprint Goal
4. Holding each other accountable as professionals

What changed in the 2020 Scrum Guide

Before (2017)		Since November 2020
Development Team	→	**Developers — one Scrum Team**
Self-organizing (how)	→	**Self-managing (who, what, when, how)**
Roles	→	**Accountabilities**
—	→	**Product Goal**
Artifacts only	→	**One commitment per artifact**
Servant-leader	→	**True leaders who serve**

Cross-functional

- Members have, **together**, all the skills needed to create value in each Sprint
- The test applies to the **team**, not to each person
- Check it with a **skills matrix**: 0 = cannot yet · 1 = with help · 2 = alone
- Team Menu: 5 of 6 skills covered · **1 gap** (interface design) → a plan

Rotation table (Deliverable 3) · who holds which accountability

Team Studio	Product Owner	Scrum Master	Developers
Class 4 · Oct 12	Amira	Noah	Sofia, Karim
Class 5 · Oct 19	Noah	Sofia	Amira, Karim
Class 6 · Oct 26	Sofia	Karim	Amira, Noah
Class 7 · Nov 2	Karim	Amira	Noah, Sofia
Mid-Term · Nov 16			
Class 10 · Nov 23	Amira	Noah	Sofia, Karim
Studio 1 · Nov 30	Noah	Sofia	Amira, Karim
Studio 2 · Dec 7	Sofia	Karim	Amira, Noah
Studio 3 · Dec 14	Karim	Amira	Noah, Sofia

Skills matrix · cross-functional?

	Amira	Noah	Sofia	Karim	Team
User research	2	1	1	0	✓
Allergen data	1	2	1	1	✓
Interface design	1	0	1	1	gap
Page building	0	1	1	2	✓
Testing on phones	1	2	1	1	✓
French	1	0	2	1	✓

0 = cannot yet · 1 = with help · 2 = alone

Team decision: Sofia and Karim pair on design in Sprint 1; re-check at the Retrospective.

Communication paths in a team of n people = n × (n − 1) ÷ 2

Self-managing

The team “internally decides **who does what, when, and how**”.

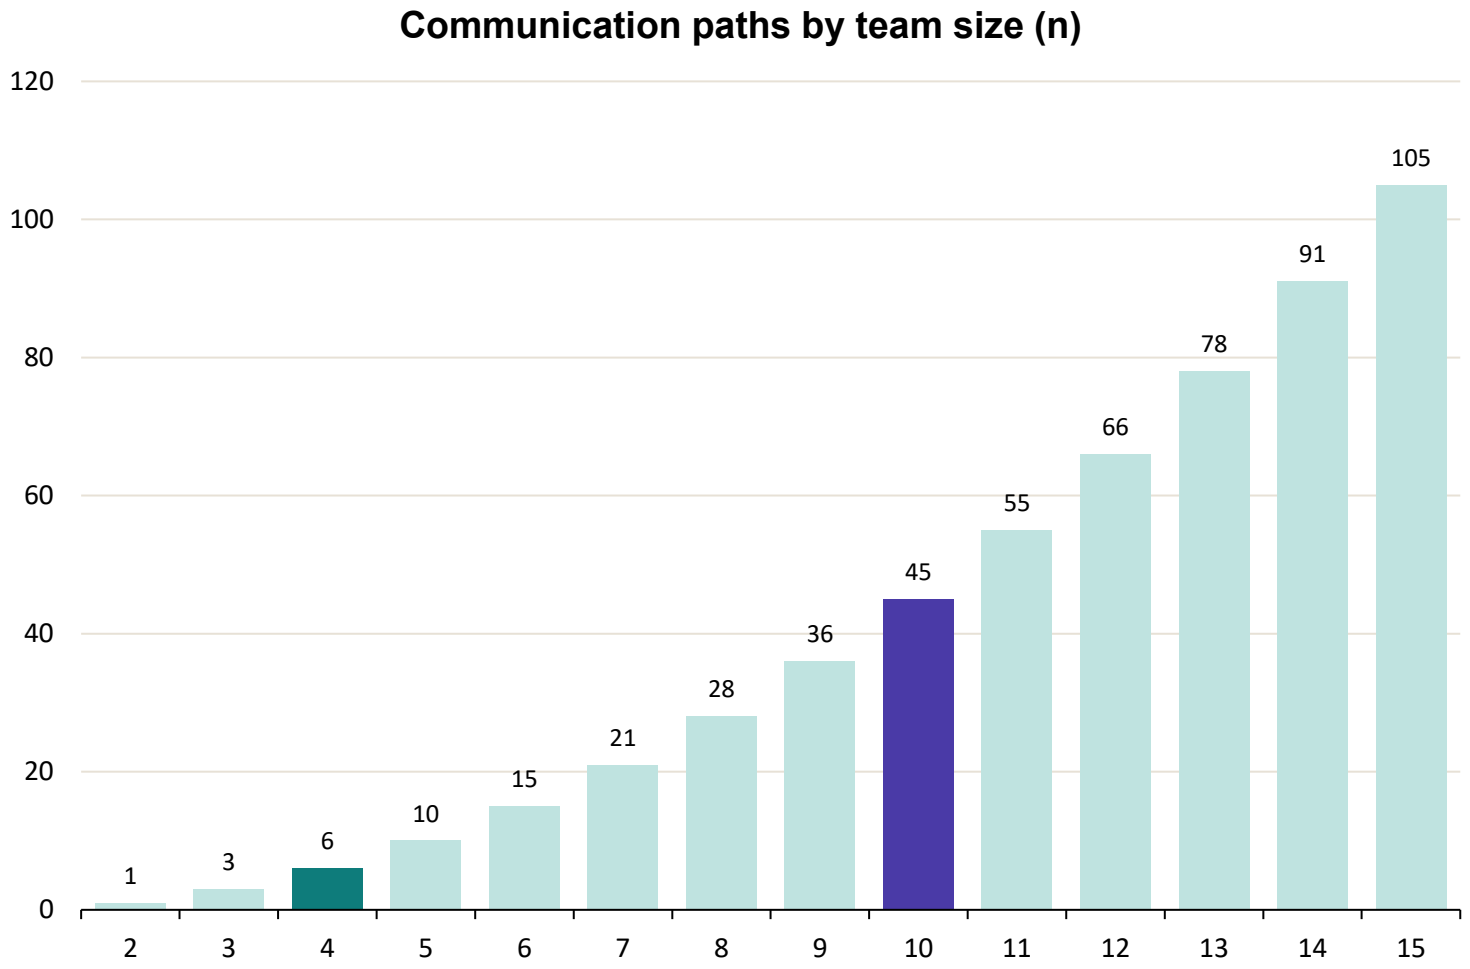

The boundaries

- Product Goal · Sprint Goal · Definition of Done
- The Product Owner decides the **order of value**
- The Scrum Master **coaches**

Inside them, the team decides

- Karim takes the icons — he built the page template
- Sofia pairs with him
- Nobody waits to be assigned

Small on purpose: typically 10 or fewer

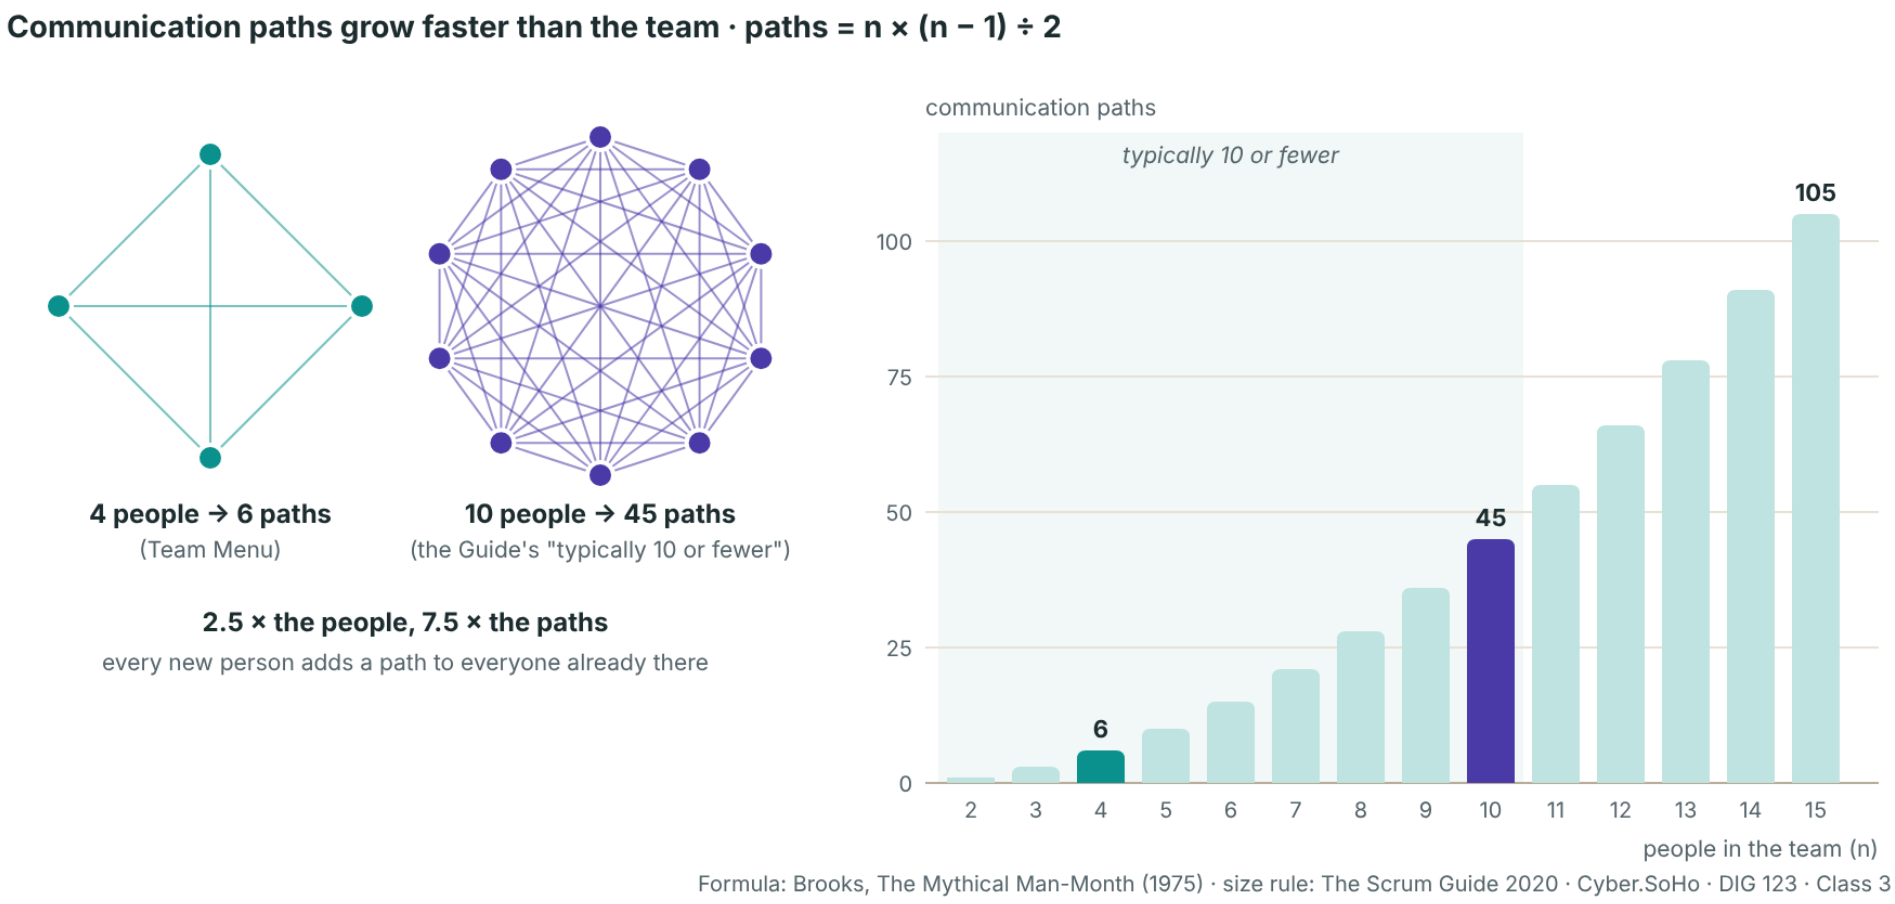

paths = n × (n – 1) ÷ 2

6 paths · team of 4

45 paths · team of 10

2.5 × the people → 7.5 × the paths

Diagram 4 · paths grow faster than the team

Left: networks of 4 and 10 people. Right: paths for n = 2 … 15, with the Guide's "typically 10 or fewer" band.

How your student team maps onto Scrum

- Team of 4: **1 Product Owner, 1 Scrum Master — and everyone builds**
- The Guide allows it when the Product Owner or Scrum Master also work on the Sprint Backlog
- Course rule: the accountabilities **rotate**
- Everyone is Product Owner **once** and Scrum Master **once** before the Mid-Term — never both at once

Team Studio	Product Owner	Scrum Master
Class 4 · Oct 12	**Amira**	**Noah**
Class 5 · Oct 19	**Noah**	**Sofia**
Class 6 · Oct 26	**Sofia**	**Karim**
Class 7 · Nov 2	**Karim**	**Amira**

Team Menu's rotation before the Mid-Term (Example 4) — each name once per column ✓

0:57 – 1:00 · 3 MINUTES

Activity 4 · Zen-break + 2-minute improv

60 seconds

- Silence
- No phones, no talking
- Breathe, stretch

Opening line for the Developer

“I have asked the kitchen twice for the recipe photos, and nothing came. I cannot check today's entries.”

The class watches for

- Did the Scrum Master first **ask what the Developer had already tried**?
- Did the Scrum Master **cause the removal** of the blocker **without taking over** the Developer's work?

WRAP-UP

Recap: Scrum I on one slide

Framework

3 accountabilities · 5 events · 3 artifacts + 3 commitments

Empiricism

Transparency → inspection → adaptation

Values

Commitment · focus · openness · respect · courage

Product Owner

Maximizes the value of the product; orders the backlog

Scrum Master

Establishes Scrum; the team's effectiveness; causes impediments' removal

Developers & team

Usable Increment every Sprint · cross-functional · self-managing · ≤ 10
