DIG 123 · Lab 02 · Module 3 — Scrum I: the framework, the pillars, the roles

Brick D3 — Scrum Team Charter · Class 3 · Monday, October 5, 2026 · Sprint 0 **Feedback date: Sunday, October 11, 2026, 23:59** · **Final deadline for all labs: Sunday, December 20, 2026, 23:59** · Blackboard · Team brick + individual Learning Log

Educational material — Cyber.SoHo / Asen Grozdanov. © 2026 Cyber.SoHo. All rights reserved. This lab is licensed to you personally, for your own study and for the activities of the course you are enrolled in — see Legal Notice, Terms of Use and Acceptable Use Policy, §4.2 "Licence — what you may do". Do not copy, post, upload, share or sell it, and do not feed it into any machine-learning system (§4.3 "Restrictions"). Everything you hand in must be your team's own work and must contain no real personal data of anyone outside your team (§6.7 and §18 "Academic Integrity and Submitted Work"). Opening this file means you accept the Notice (§2 "Scope and Acceptance"). The student acknowledgement form (Annex A, e-signature) is provided as a separate file. **Full text: https://cyber-soho.github.io/prevmon/00.01.%20cyber.soho%20-%20legal.html**

0. At a glance

Module	3 — Scrum I: the framework, the pillars, the roles (Topic 1 of the syllabus: Sprints, Backlog, Increment, Definition of Done; Scrum Master, Product Owner, Development Team)
Class	Class 3 · Monday, October 5, 2026 · Sprint 0 (September 21 → October 11)
Brick	**D3 — Scrum Team Charter**, three pages at most, built on your **D1** (Team Charter & Product Idea Card) and your **D2** (Product Vision Board)
Ponderation	**1 · 2 · 1** — 1 h lecture (the input; not counted as lab work) · **2 h Team Studio in class** · **1 h Home Sprint**. Your lab work = **3 hours, maximum**.
Who	Your team of 4 (3–5 if the class size requires it). The Learning Log is individual.
Feedback date	**Sunday, October 11, 2026, 23:59.** Hand in what you have: you get written feedback, and the version you hand in becomes part of your Mid-Term Basis Kit.
Final deadline	**Sunday, December 20, 2026, 23:59** — the final, graded version of **every** lab (Lab 01 to Lab 05) and the Portfolio v1.0. The three Studio Weeks of December (Nov 30, Dec 7, Dec 14) are reserved for finishing and improving.
Hand-in	Blackboard → DIG 123 → Assignments → *D3 — Scrum Team Charter*. Each member submits the team's PDF (Portable Document Format) + their own Learning Log. Resubmission is open until December 20.
Feeds into	CQ1 (Checkpoint Quiz 1, today, individual, 15 min), Lab 03 (Module 5 — your first Product Backlog and Sprint), the Mid-Term (November 16, written from your own D1, D2, D3 and Labs 03–04).
Tools	**Open.** Anything suitable and available — a board, a spreadsheet, a whiteboard, paper on a wall — or a tool you build yourselves. See section 3.
Reading (weekly routine, outside the 3 h)	The whole **Scrum Guide 2020 — scrumguides.org** (about 13 pages) and Denning, *The Age of Agile*, Chapter 3 "The Law of the Customer".

Learning outcomes of this lab. After it, you can (1) draw the Scrum framework as 3 · 5 · 3 — three accountabilities, five events, three artifacts with their commitments — and place your own team in it;

(2) say what the **Product Owner**, the **Scrum Master** and the **Developers** are each accountable for, *for your product*, and name one anti-pattern each must avoid; (3) write an empiricism plan with a measurable **acceptable limit**, so that inspection can find a deviation and adaptation has a rule; (4) turn each of the five Scrum values into one behaviour that can be observed; (5) test your team for cross-functionality and compute its communication paths; (6) tell the history of Scrum in five to seven sourced dates. These map to the syllabus **LO (Learning Outcome) 1** ("the concept and utility of Agile methodologies in business applications"), **LO 3** ("understand the foundations of Scrum methodology") and **LO 4** ("apply all work methodologies to assignments, projects and other work").

1. Why this lab exists

Last week your team decided *what* the product is for (D2). Today it decides *who is accountable for what* while building it, and *how the team will find out, early, that something is going wrong*. A Scrum Team without this page still meets and still works — but every disagreement about priorities becomes personal, every delay is discovered at the end, and the same two people end up doing everything.

The page you make today is used every Monday until December: the rotation table tells you who is Product Owner and Scrum Master at each Team Studio; the role cards are what you read when a decision is disputed; the empiricism plan is the rule you apply in Lab 03, when your first Sprint starts. The Mid-Term asks you to explain your accountabilities and your empiricism plan from your own D3.

One box per idea, three pages at most in total. The thinking is the work; the page records it.

2. The theory you need — the "1" of 1 · 2 · 1

The lecture hour gives you this in four lessons. Here it is in writing, so the lab stands on its own if you missed a part.

2.1 What Scrum is, and where it comes from

The official definition is in the **Scrum Guide** written by Ken Schwaber and Jeff Sutherland (The Scrum Guide 2020 — scrumguides.org; free; licensed under **CC BY-SA 4.0** (Creative Commons Attribution-ShareAlike 4.0 International)): Scrum is *a lightweight framework that helps people, teams and organizations generate value through adaptive solutions for complex problems*. Each word is precise:

- **Lightweight** — very few mandatory rules; the complete official text is about thirteen pages.
- **Framework** — the minimum set of mandatory elements, which the team completes with its own practices. A **process** is a fixed sequence of steps; a **methodology** is a complete shared way of working; a **framework** is the smallest of the three: the structure is fixed, the techniques are yours.
- **Value** — the benefit the product creates for the people who use it, not the number of screens built.
- **Complex problem** — a problem whose requirements, and the means to meet them, are not fully known at the start; the result of a decision is known only after it has been tried.

Seven dates explain where the framework comes from:

Year	What happened	Source (official)
1986	Hirotaka Takeuchi and Ikujiro Nonaka publish *The New New Product Development Game* in the **HBR** (Harvard Business Review): one multidisciplinary team, overlapping phases; they call the approach "scrum".	hbr.org
1993	Jeff Sutherland's team at Easel Corporation runs the first software project in short fixed cycles with a daily team meeting.	InfoQ, "The Roots of Scrum"

Year	What happened	Source (official)
1995	Ken Schwaber and Jeff Sutherland present Scrum at the **OOPSLA** (Object-Oriented Programming, Systems, Languages & Applications) conference of the **ACM** (Association for Computing Machinery) in Austin, Texas.	Schwaber, *SCRUM Development Process* — Springer · acm.org
2001	Both are among the seventeen authors of the Agile Manifesto (Lab 01).	agilemanifesto.org
2010	The first Scrum Guide: the official, free definition of Scrum.	Scrum Guide revisions — scrumguides.org
2016	The Guide adds the five Scrum values.	scrumguides.org/revisions.html
2020	November 18, 2020: the current edition — shorter, for any field; one Scrum Team, Developers, self-managing, the Product Goal, one commitment per artifact.	The Scrum Guide 2020

2.2 The whole framework on one page: 3 · 5 · 3

Element	What it is	The items
3 accountabilities	The people, each answerable for one result.	**Product Owner** — the value of the product · **Scrum Master** — Scrum being understood and used, and the team's effectiveness · **Developers** — a usable Increment every Sprint.
5 events	Meetings with a fixed purpose and a **time-box** (a maximum duration).	The **Sprint** (one month or less; contains the other four) · **Sprint Planning** · **Daily Scrum** (15 minutes) · **Sprint Review** · **Sprint Retrospective**.
3 artifacts	The work made visible, so that it can be inspected.	**Product Backlog** → commitment: **Product Goal** · **Sprint Backlog** → commitment: **Sprint Goal** · **Increment** → commitment: **Definition of Done**.

Our syllabus says "roles"; the 2020 Guide says **accountabilities**. A role is a title; an accountability is a *result* one person answers for. Your role cards today state results.

2.3 Empiricism: three pillars, five values

Scrum uses **empirical process control**: decisions are taken from what is observed, because in complex work the steps and their results cannot be fully predicted in advance (the opposite is **defined process control**, used when every step is known and repeatable). The three **pillars** make the empirical loop, and each one makes the next possible:

- **Transparency** — the process and the work are visible to those who perform it and those who receive it. Without it, inspection is "misleading and wasteful" (Scrum Guide).
- **Inspection** — the artifacts and the progress toward the agreed goals are checked frequently, to detect a **deviation**: a measured result outside an **acceptable limit** agreed in advance. Every Scrum event is a formal inspection point.
- **Adaptation** — when a deviation is found, the process or the product is adjusted as soon as possible — which requires people who are allowed to change it.

The five **values** (added in 2016) are the behaviours that carry the pillars: **commitment**, **focus**, **openness**, **respect**, **courage**. Openness produces transparency; courage makes an honest inspection possible; commitment and focus make adaptation happen; respect lets a team manage itself.

2.4 The accountabilities, and who decides what

- **Product Owner** — accountable for *maximizing the value of the product resulting from the work of the Scrum Team*. Owns Product Backlog management: develops and communicates the Product Goal, creates and communicates backlog items, orders them, keeps the backlog transparent. One

person, not a committee. Anti-patterns: the absent Product Owner, the committee, the proxy without authority, the Product Owner who tells the Developers *how* to work.

- **Scrum Master** — accountable for *establishing Scrum as defined in the Scrum Guide* and for *the Scrum Team's effectiveness*; serves the Scrum Team, the Product Owner and the organization; **causes the removal of impediments** (obstacles the Developers cannot remove themselves in reasonable time). The 2020 Guide calls Scrum Masters "true leaders who serve" (until 2017: *servant-leader*, a term from Robert K. Greenleaf's 1970 essay — Greenleaf Center for Servant Leadership — greenleaf.org). Not a project manager. Anti-patterns: the boss, the secretary, the hero, the absentee.
- **Developers** — committed to creating any aspect of a usable **Increment** each Sprint; accountable for the Sprint Backlog plan, for quality through the **Definition of Done**, for adapting the plan daily toward the Sprint Goal, and for holding each other accountable as professionals.

Decision	Accountable
Order of the Product Backlog · the Product Goal · cancelling a Sprint	Product Owner
How much work enters the Sprint · how the work is done · quality of the Increment	Developers
Events take place, within their time-box · an impediment gets removed	Scrum Master
The Sprint Goal	The whole Scrum Team

2.5 One Scrum Team: cross-functional, self-managing, small

The Scrum Team is one Product Owner, one Scrum Master and Developers, with **no sub-teams or hierarchies**. It is **cross-functional** (together, its members have all the skills needed to create value each Sprint — the test applies to the team, not to each person) and **self-managing** (it decides *who does what, when and how*, inside the boundaries set by the Product Goal, the Sprint Goal and the Definition of Done). It is typically **10 or fewer** people, because the number of **communication paths** grows faster than the team: **paths = n × (n − 1) ÷ 2** — 6 for 4 people, 45 for 10 (Frederick P. Brooks Jr., *The Mythical Man-Month*, 1975 — ACM Turing Award page). A Product Owner or Scrum Master who also builds is a Developer too; the Guide allows it. **This course adds one rule: the accountabilities rotate**, so that each of you practises each of them.

3. Tools are open — choose, research, or build your own

Every tool named in this lab is a starting point, never a rule. You may swap any of them for any other tool that is suitable and available to your team, or **create your own**: a spreadsheet with a formula that draws the rotation, a Markdown file in your repository, cards on a wall photographed with a phone, a small web page your team writes. Be creative, and research before you commit.

Need	Starting points (official sites, checked October 2026 — verify; free tiers and features change)
A fair draw for the "roles roulette"	Paper slips in a cup · a die · RANDOM.ORG list randomizer — random.org/lists · a spreadsheet `RAND()` column you sort — or a draw you invent and explain in one line.
The rotation table and the skills matrix	Google Sheets — workspace.google.com · LibreOffice Calc — libreoffice.org · Microsoft Excel · the Class 3 companion workbook (sheets "5 Rotation" and "6 Skills matrix", on Blackboard) · paper.
The team board (from now on, every brick has a card)	Trello — trello.com · GitHub Projects — github.com/features/issues · Jira — atlassian.com/software/jira · open-source: Focalboard — focalboard.com, Wekan — wekan.github.io, Taiga — taiga.io · sticky notes on a wall.
The role cards and the empiricism loop	Excalidraw — excalidraw.com · draw.io — drawio.com · tldraw — tldraw.com · Penpot — penpot.app · a word processor · index cards.

Need	Starting points (official sites, checked October 2026 — verify; free tiers and features change)
The history timeline	Any of the above, or a **Mermaid** timeline written as text (mermaid.js.org).
Writing and exporting the page	LibreOffice — libreoffice.org (free, exports PDF) · any editor. Spelling help: **tutor.com**, free for every student through Blackboard.

Research a tool before you adopt it — ten minutes, once per tool:

1. Go to the **official site only** (never a mirror, a "download manager" or a search-engine advertisement).
2. Read the **free-tier limits**: boards, members, files, storage.
3. Read the **licence or Terms of Use** — may a student team use it, and what happens to your data? (Legal Notice §6.6 "Software licences" and §14 "External Links, Downloads and Third-Party Tools")
4. **Check the link** before you click or install: submit the **URL** (Uniform Resource Locator) to **VirusTotal — virustotal.com** and the domain to **Google Safe Browsing — transparencyreport.google.com**; a clean result is never a guarantee (Legal Notice, Annex C "Link and Download Safety Checklist").
5. Try it for five minutes with the whole team, then decide. Write the tools you chose — or the tool you built — in the footer of your D3.

If a tool disappears, changes its free tier or is not available on campus, switch. The accountabilities, the plan and the pledge are the work; the tool is not.

---

4. Before you start — what you need on the table

- **Your D1 and D2**, open, in the team folder. D3 is built *on* them: same team, same product, same users. From today the product is fixed for the semester.
- The **D3 template** (section 9, or `DIG123_Lab02_D3_Template.md` on Blackboard), opened by the Scribe.
- The **Class 3 slides or hand-out** — diagram 3 ("who decides what") is your reference for Step 2.
- A **timer** the whole team can see; **sticky notes** or a whiteboard.
- **Four hats for today** (rotated every Monday, independent of the Scrum accountabilities): **Facilitator** (keeps the team on the step, asks the quiet member first) · **Timekeeper** (calls every time-box aloud) · **Scribe** (types into the template as the team talks) · **Presenter** (speaks at the Sprint Review).

---

5. Part A — Team Studio, 120 minutes, in class

The studio opens with **CQ1 (Checkpoint Quiz 1)** — individual, closed book, 15 minutes, 2 % of the grade, on Classes 1–3. Then the studio runs like a small Sprint: **Planning → Build → Sprint Review → Retrospective**.

Clock	Box	Step	Output on the page
0:00 – 0:15	15'	**CQ1** — individual, closed book	—
0:15 – 0:20	5'	**Step 0 · Planning**	Goal written; hats given; template open
0:20 – 0:40	20'	**Step 1 · Roles roulette and rotation table**	Box 1
0:40 – 1:10	30'	**Step 2 · Three role cards**	Box 2
1:10 – 1:30	20'	**Step 3 · Empiricism plan and values pledge**	Box 3 and Box 4
1:30 – 1:40	10'	**Step 4 · Cross-functional check and team size**	Box 5

Clock	Box	Step	Output on the page
1:40 – 1:55	15'	**Sprint Review** — role cards in 90 seconds, class question	Feedback line in the footer
1:55 – 2:00	5'	**Retrospective** — start / stop / continue	Three notes in the footer

Step 0 · Planning — 5 minutes

1. The Facilitator reads the D2 vision sentence aloud, once.
2. The Scribe writes today's goal at the top of the template: **"Our Scrum Team is set up: who is accountable for what, when, and how we inspect and adapt — for [product]."**
3. Give out the four hats; write the names in the footer.
4. The Timekeeper sets 20 minutes for Step 1 and says "go".

Done when: the goal is on the page and everyone knows their hat.

Step 1 · Roles roulette and the rotation table — 20 minutes

You will decide, fairly and in advance, who holds the **Product Owner** and **Scrum Master** accountabilities at each of the eight Team Studios that remain this semester. Everyone not holding one of the two is a Developer — and the Product Owner and Scrum Master build too.

1a · The draw (5 minutes). Put the members' names in a random order with any fair method from section 3 (slips in a cup, a die, a list randomizer, a spreadsheet `RAND()`). Write the resulting order: member 1, member 2, member 3, member 4.

1b · The table (10 minutes). Use the **round-robin** rule: at Team Studio number i (counting from 0), the Product Owner is member (i mod n) + 1 and the Scrum Master is member ((i + 1) mod n) + 1, where n is the number of members. In plain words: the list turns by one place each time, and the Scrum Master is always the next person after the Product Owner. With four members the table repeats every four studios:

Team Studio	Date	Product Owner	Scrum Master	Developers
Class 4	Mon Oct 12	member 1	member 2	members 3, 4 (+ the Product Owner and Scrum Master build too)
Class 5	Mon Oct 19	member 2	member 3	members 4, 1
Class 6	Mon Oct 26	member 3	member 4	members 1, 2
Class 7	Mon Nov 2	member 4	member 1	members 2, 3
Class 10	Mon Nov 23	member 1	member 2	…
Studio Week 1	Mon Nov 30	member 2	member 3	…
Studio Week 2	Mon Dec 7	member 3	member 4	…
Studio Week 3	Mon Dec 14	member 4	member 1	…

(The review Monday, Nov 9, and the Mid-Term, Nov 16, have no rotation.) A team of three or five uses the same formula; with five members, one person holds each accountability once before the Mid-Term

and the fifth studio goes to the member who has not yet held the Product Owner role — write how you resolved it in one line.

1c · Check the two rules (5 minutes). Count, for the four studios before the Mid-Term (Oct 12 → Nov 2): (1) **every member is Product Owner once and Scrum Master once**; (2) **nobody holds both in the same studio**. Write the two counts under the table ("Rule 1: ✓ — each name once per column; Rule 2: ✓"). If a member already knows they will miss a date, swap two rows now and recheck — swapping rows keeps both rules true.

Done when: the table has eight rows with names, the two rule checks are written, and every member has said "I agree" aloud.

Step 2 · Three role cards — 30 minutes

One card per accountability, written **for your product**, ten minutes each. A role card is a short job description of a *result*, not of a person. Each card has five lines:

Line	What to write	The usual mistake
Accountable for	One sentence, from the Scrum Guide, made specific to your product.	Copying the Guide's sentence without the product in it.
Three main responsibilities	Three things this accountability does every Sprint, each starting with a verb.	Tasks that belong to another accountability (a Product Owner who "assigns tasks").
Decides	The decisions from the table in section 2.4 that this accountability owns — in your product's words.	"Decides everything together" — then nobody is accountable.
Does not decide	One decision that belongs to someone else, named.	Leaving it empty. This line prevents most team conflicts.
Anti-pattern we will avoid	One named anti-pattern and the sign that would show it is happening.	Naming it without the sign.

How to do it, so it takes 30 minutes and not 60:

- *Minutes 0–4 of each card — write alone.* Each member writes the five lines silently for the card being done.
- *Minutes 4–9 — merge.* The Scribe takes the best line of each kind; the Facilitator settles disagreements in one minute each.
- *Minute 10 — the boundary test.* Read the *Decides* line of the new card next to the *Decides* lines of the cards already done. The same decision must never appear on two cards (except the Sprint Goal, which belongs to the whole Scrum Team). If it does, decide now who owns it.

Done when: three cards, five lines each, no decision on two cards, one anti-pattern per card with its visible sign.

Step 3 · Empiricism plan and values pledge — 20 minutes

3a · Empiricism plan (12 minutes). Write one line per pillar, specific to your product and your team, plus one **acceptable limit**:

- **Transparency** — *what* is visible, *where*, and *to whom*. Example form: "Our board (To do · Doing · Done) in [tool], open to the professor and to one real user; every item shows who checked it."
- **Inspection** — *when*, *what* is inspected, *by whom*, against which limit. Example form: "Every Monday at the Sprint Review, the Product Owner and one real user check [the newest increment] against our limit."
- **Adaptation** — *who* may change *what*, *how fast*, when the limit is exceeded. Example form: "If the limit is exceeded, the Developers change [the process step] before the next Daily Scrum; the

Product Owner may re-order the backlog the same day."

- **Acceptable limit** — one measurable tolerance agreed in advance, with a number. Examples: "no more than 1 of 10 user test tasks fails", "every backlog item updated within 48 hours", "zero wrong entries published". Without a number, inspection cannot tell a deviation from normal variation.

3b · Values pledge (8 minutes). One **observable behaviour** per value — the same filming test as Lab 01: could someone film your team doing it? A behaviour names a moment, a place or channel, and an action.

Value	Ask yourselves	Example form (do not copy; write yours)
Commitment	What do we promise each other, and how will we see if we keep it?	"We take into a Sprint only what we believe we can finish; a member who is stuck gets help before anyone starts new work."
Focus	What do we stop doing so that the Sprint Goal moves?	"One Sprint Goal at a time; phones face down during the Daily Scrum."
Openness	How fast does bad news reach the team?	"'I am blocked' is written in the team chat on the day it happens."
Respect	How do we decide, and how do we treat each other's estimates?	"We decide with the rule in our charter; nobody's estimate is laughed at."
Courage	What do we show that we would rather hide?	"We show the user a failed test at the Review instead of hiding it."

Done when: three pillar lines, one acceptable limit with a number, five behaviours that pass the filming test.

Step 4 · Cross-functional check and team size — 10 minutes

4a · Skills matrix (7 minutes). List the five or six skills your product needs in every Sprint (for most products: user research, content or data, interface design, building, testing with users, one domain skill such as a language or a subject). Each member rates themselves for each skill: **0** = cannot yet, **1** = can with help, **2** = can alone. For each skill, the team's level is the **highest** individual level (the test applies to the team). A skill whose best level is below 2 is a **gap**; write one line on how the team will close it (pair a member with a tutor, a tutorial with its official link, a swap of tasks, or reducing the scope).

4b · Communication paths (3 minutes). Compute **n × (n − 1) ÷ 2** for your team and for a team of 10; write one sentence on what the difference means for your weekly coordination time (assume five minutes per path per week).

Done when: the matrix is filled, every gap has a plan line, and the two path numbers are written.

Sprint Review — 15 minutes

Each team's Presenter stands and gives the **three role cards in 90 seconds** — the *Accountable for* line and the *Anti-pattern* line of each, nothing else. No slides. The class asks one question per team, preferably a "who decides if…?" question. The Scribe writes the question and the team's answer in the footer.

Retrospective — 5 minutes

Start / Stop / Continue — one sticky note per person per column, about *how the team worked today*. No discussion; photograph the notes. The three most repeated go into the footer.

End of studio: 120 minutes. If you are behind, hand in what is on the page on October 11 — the Home Sprint finishes it. Nothing new starts at home.

---

6. Part B — Home Sprint, 60 minutes, at home

Clock	Box	Step
0:00 – 0:25	25'	**Step 5 · Scrum history timeline (mini-research)**
0:25 – 0:40	15'	**Step 6 · Polish the pages**
0:40 – 0:50	10'	**Step 7 · The four "done when" checks + one cold read**
0:50 – 1:00	10'	**Step 8 · Export, name, submit — and your Learning Log**

Step 5 · Scrum history timeline — 25 minutes

Split the work: each member researches one or two milestones, then the Scribe assembles. Produce **five to seven milestones** (at least 1986, 1995, 2001, 2010 and 2020), each with:

- the **year** and a **name** (three to five words);
- **one sentence of at most 30 words** in your own words — what happened and why it matters for Scrum;
- **one source**: the address of an official or original page, starting with `https://`. The table in section 2.1 is a starting point; a different reliable source is welcome. A source you did not open yourself does not count.

Draw it as a horizontal line with the years in order — on paper, in a whiteboard tool, or as a Mermaid `timeline` block. **Check every source link** before you put it on the page (Annex C).

Step 6 · Polish — 15 minutes

- **Three pages at most** (a fourth page is allowed only for photos of paper boards).
- Same words everywhere: the product name, member names and the four accountability names are spelled identically in every box.
- Every responsibility starts with a verb; every behaviour can be filmed; the limit has a number.
- Footer complete: team, members and hats, date, tools used (or built), the Review question and answer, the three retro notes, AI (Artificial Intelligence) tools used for (spelling / none).

Step 7 · The four "done when" checks + one cold read — 10 minutes

Your D3 is done when all four are true:

1. **The rotation is fair.** Before the Mid-Term, each name appears once in the Product Owner column and once in the Scrum Master column, and never twice in one row.
2. **No decision has two owners.** The *Decides* lines of the three cards do not overlap, except the Sprint Goal.
3. **Inspection can find a deviation.** The acceptable limit is a number, and the inspection line says when and by whom it is checked.
4. **Every timeline sentence is sourced.** At most 30 words each, and each with an `https://` source you opened.

Then one member reads the whole charter **cold**, start to finish, and marks every place they stumbled. Fix those; do not start a new debate.

Step 8 · Export, name, submit — and your Learning Log — 10 minutes

- Export **one PDF**: `DIG123_D3_<TeamName>_2026-10-11.pdf` (example: `DIG123_D3_Aurora_2026-10-11.pdf`). A later, improved version keeps the same name with the new date.
- **Each member** submits the team PDF on Blackboard → DIG 123 → Assignments → *D3 — Scrum Team Charter* and adds their own **Learning Log** (five lines: what I did · what I learned · what surprised me · one question I still have · one thing I will apply next week). Everyone submitting the same PDF is deliberate: each of you keeps a personal copy for the Mid-Term.

- Update the team board: move the D3 card to *Done*; create the Lab 03 card.

Dates. Hand in by the **feedback date, Sunday, October 11, 2026, 23:59** to receive written feedback before Lab 03. You may improve and resubmit until the **final deadline, Sunday, December 20, 2026, 23:59** — the last version submitted by then is the one graded. A lab not submitted by December 20 scores 0.

7. What earns the marks

D3 is marked out of 10 as a team, then adjusted by each member's Learning Log.

Points	For	Full marks look like
4	**Rotation table and role cards** (Box 1, Box 2)	Fair draw explained; eight rows; both rules checked; three cards with five specific lines each; no decision on two cards; an anti-pattern with its visible sign on each card.
3	**Empiricism plan and values pledge** (Box 3, Box 4)	One line per pillar (what, where, when, who); a measurable acceptable limit; five behaviours that pass the filming test.
3	**Cross-functional check and history timeline** (Box 5, Box 6)	Skills matrix filled with honest levels; every gap has a plan; path numbers correct; five to seven milestones, ≤ 30 words each, every one with an opened `https://` source.

The two ways to lose points most teams find themselves: role cards that list tasks instead of results ("the Scrum Master sends the minutes"), and an inspection with no number ("we will check the quality"). Both are fixed in five minutes if you look for them before you export.

8. Rules of the hand-in — integrity, privacy, tools

- **Own work.** The charter is your team's; the Learning Log is yours. The university's Academic Honesty Policy and Legal Notice §18 "Academic Integrity and Submitted Work" apply. Submissions go through SafeAssign.
- **AI (Artificial Intelligence) tools.** For D3 they may be used to check spelling and grammar and to look up the meaning of a word; they may **not** write your cards, your plan, your pledge or your timeline sentences. The Mid-Term is written by hand, from this page. If you used any AI tool, add one line in the footer saying for what. (The rule announced on Blackboard by the professor prevails if it differs.)
- **Privacy.** Members' first names are fine; no contact details, no data about anyone outside the team. Skills ratings are self-assessments for team planning only (Legal Notice §6.7, §20).
- **Third-party tools.** You are responsible for the terms of every tool and platform you choose, and for your data in it (Legal Notice §6.6, §14). Check links before you click (Annex C).
- **Sharing.** This lab, the template and your team's work are not to be posted on note-sharing or "study help" sites (Legal Notice §4.3). Your own submissions remain your copyright (§18.3).
- **Scrum Guide quotations** are used under its CC BY-SA 4.0 licence (creativecommons.org); quote it with the source when you use its words.
- **As is.** Examples and links were correct in October 2026; tools and sites change (Legal Notice §11 "Disclaimer of Warranties").

9. The D3 template — Scrum Team Charter (three pages at most)

Copy this into your tool of choice, or download `DIG123_Lab02_D3_Template.md` from Blackboard. Keep the box order.

```
DIG 123 · D3 — SCRUM TEAM CHARTER                          Team: ________   Date: ________
Today's goal: Our Scrum Team is set up — who is accountable for what, when, and how we
inspect and adapt — for _______________ (product).

BOX 1 · ROLES ROULETTE AND ROTATION TABLE
Draw method: _____________   Order: 1 ______ 2 ______ 3 ______ 4 ______ (5 ______)
Studio          Date     Product Owner   Scrum Master   Developers
Class 4         Oct 12   …               …              …
Class 5         Oct 19   …               …              …
Class 6         Oct 26   …               …              …
Class 7         Nov 2    …               …              …
Class 10        Nov 23   …               …              …
Studio Week 1   Nov 30   …               …              …
Studio Week 2   Dec 7    …               …              …
Studio Week 3   Dec 14   …               …              …
Rule 1 (Product Owner once, Scrum Master once before the Mid-Term): ✓ / ✗   Rule 2 (never both
at once): ✓ / ✗

BOX 2 · ROLE CARDS (one per accountability, five lines each)
PRODUCT OWNER  — Accountable for: … · Responsibilities: 1 … 2 … 3 … · Decides: … ·
                 Does not decide: … · Anti-pattern we avoid (and its sign): …
SCRUM MASTER   — (same five lines)
DEVELOPERS     — (same five lines)

BOX 3 · EMPIRICISM PLAN
Transparency: (what is visible, where, to whom) …
Inspection:   (when, what, by whom, against which limit) …
Adaptation:   (who changes what, how fast) …
Acceptable limit (a number): …

BOX 4 · VALUES PLEDGE (one observable behaviour per value)
Commitment → …   Focus → …   Openness → …   Respect → …   Courage → …

BOX 5 · CROSS-FUNCTIONAL CHECK AND TEAM SIZE
Skill            M1   M2   M3   M4   Best   Covered / gap → plan
…
Communication paths: our team (n = __) = __ · a team of 10 = 45 · what it means for us: …

BOX 6 · SCRUM HISTORY TIMELINE (5–7 milestones, ≤ 30 words each, one https source each)
Year · name · sentence · source

FOOTER
Hats: F __ T __ S __ P __ · Tools used / built: __ · Review question and our answer: … ·
Retro — start: … stop: … continue: … · AI tools used for: spelling / none
```

10. Worked example — "Team Menu" (the fictional team of the Class 3 lecture)

Read it to see the *level of detail* expected; do not copy it — the graders know it. Team Menu (Amira, Noah, Sofia, Karim) builds an allergen page for the main cafeteria; its Product Goal: *every student can check the allergens of every hot meal in the main cafeteria before lining up.*

Box 1. Draw: four slips in a cup, drawn by the professor. Order: 1 Amira, 2 Noah, 3 Sofia, 4 Karim. Product Owner / Scrum Master — Oct 12: Amira / Noah · Oct 19: Noah / Sofia · Oct 26: Sofia / Karim · Nov 2: Karim / Amira · Nov 23: Amira / Noah · Nov 30: Noah / Sofia · Dec 7: Sofia / Karim · Dec 14: Karim / Amira. Rule 1 ✓ (each name once per column, Oct 12 → Nov 2) · Rule 2 ✓.

Box 2 — Product Owner card. *Accountable for:* maximizing the value of the allergen page for students who must avoid an allergen. *Responsibilities:* keep the Product Goal visible on the board; write and order the backlog items by value per point, with their dependencies; bring the cafeteria manager's requests into the backlog instead of into the Sprint. *Decides:* the order of the backlog; whether a new request (for example, "show sesame on every dish") enters it and where. *Does not decide:* how many

items fit in the Sprint (the Developers do). *Anti-pattern we avoid:* the proxy without authority — the sign would be "we will ask the manager" more than once per Sprint for a decision that is ours.

Scrum Master card. *Accountable for:* Scrum being used as the Guide defines it, and the team's effectiveness. *Responsibilities:* make sure every event happens within its time-box; coach the team to decide its own plan; cause the removal of impediments (for example, bringing the head chef into the conversation when recipe photos arrive late). *Decides:* that an event starts and ends on time. *Does not decide:* the order of the backlog. *Anti-pattern we avoid:* the hero — the sign would be the Scrum Master fixing the Developers' problems while they watch.

Developers card. *Accountable for:* a usable Increment of the allergen page every Sprint, meeting the Definition of Done. *Responsibilities:* plan the Sprint Backlog; check every entry against the kitchen's recipe card before publishing; adapt the plan at each Daily Scrum. *Decides:* how much work enters the Sprint (8 of 10 points in Sprint 1); how the pages are built. *Does not decide:* which item comes first. *Anti-pattern we avoid:* skipping the Definition of Done under pressure — the sign would be an entry published without the second-person check.

Box 3. *Transparency:* one board (To do · Doing · Done) in GitHub Projects, open to the professor and to the cafeteria manager; every allergen entry shows who checked it and when. *Inspection:* every Friday, a second member compares each published entry with the recipe card; every Review, the manager checks the newest page. *Adaptation:* if the limit is exceeded, the Developers change the checking step before the next Monday; the Product Owner may re-order the backlog the same day. *Acceptable limit:* zero wrong entries published.

Box 4. Commitment → we take into a Sprint only what we believe we can finish. Focus → one Sprint Goal at a time; phones face down at the Daily Scrum. Openness → "I am blocked" is written in the team chat the same day. Respect → we decide with the rule in our charter; no estimate is laughed at. Courage → we show the manager a wrong result at the Review.

Box 5. Skills (Amira · Noah · Sofia · Karim → best): user research 2 · 1 · 1 · 0 → 2 covered · allergen data 1 · 2 · 1 · 1 → covered · interface design 1 · 0 · 1 · 1 → **gap**: Sofia and Karim follow one official tutorial of the design tool they chose and pair on the first screen · building 0 · 1 · 1 · 2 → covered · testing on phones 1 · 2 · 1 · 1 → covered · French 1 · 0 · 2 · 1 → covered. Paths: 4 × 3 ÷ 2 = 6; a team of 10 has 45, so at five minutes per path per week we coordinate in 30 minutes, not 225.

Box 6 (excerpt). 1986 · "One team, overlapping phases" · Takeuchi and Nonaka describe product teams that work through overlapping phases and call the approach scrum. · https://hbr.org/1986/01/the-new-new-product-development-game … (five to seven lines in total).

11. Where this goes next — the lab calendar to December 20

Labs now come every second module, so that you have time to do each one well. Each lab has a **feedback date** (the Sunday after its class, for written feedback) and **one final deadline for all of them: Sunday, December 20, 2026, 23:59**.

Lab	Module · Class · Date	Brick	Feedback date
Lab 01	Module 1 · Class 2 · Mon Sep 28	D2 · Product Vision Board	Sun Oct 4
Lab 02	**Module 3 · Class 3 · Mon Oct 5**	**D3 · Scrum Team Charter**	**Sun Oct 11**
—	Module 4 · Class 4 · Mon Oct 12	No lab: Scrum events in the studio; Sprint 1 starts	—
Lab 03	Module 5 · Class 5 · Mon Oct 19	Sprint 1 Kit & User Story Set (backlog, Definition of Done, stories, forecast)	Sun Oct 25

Lab	Module · Class · Date	Brick	Feedback date
—	Module 6 · Class 6 · Mon Oct 26	No lab: CQ2 (Checkpoint Quiz 2) + Kanban practice in the studio	—
Lab 04	Module 7 · Class 7 · Mon Nov 2	Flow & Digital Business Brief	Sun Nov 8
—	Mon Nov 9 · Mon Nov 16	Mid-Term Review · **Mid-Term** (written from your own D1, D2, D3, Lab 03 and Lab 04 as handed in by Nov 8)	—
Lab 05	Module 10 · Class 10 · Mon Nov 23	Design Thinking Pack	Sun Nov 29
Studio Weeks	Mon Nov 30 · Mon Dec 7 · Mon Dec 14	No new lab: finish, improve after feedback, assemble Portfolio v1.0	—
All	**Sun Dec 20, 2026, 23:59**	**Final versions of Labs 01–05 + Portfolio v1.0**	—

- **Lab 03** opens your D2 increments and your D3 rotation: the Product Owner of Class 5 orders the first Product Backlog; the empiricism plan of today is applied in Sprint 1.
- **Mid-Term · November 16** — asks you to explain your accountabilities, your empiricism plan and your limit, from your own D3.

12. Glossary of this lab

- **Scrum** — a lightweight framework that helps people, teams and organizations generate value through adaptive solutions for complex problems (Scrum Guide 2020).
- **Framework / methodology / process** — smallest to largest: structure only · a complete shared way of working · a fixed sequence of steps.
- **Accountability** — a result one person answers for; the 2020 Guide's word for what our syllabus calls a role.
- **Product Owner** — accountable for maximizing the value of the product; orders the Product Backlog; one person.
- **Scrum Master** — accountable for establishing Scrum and for the team's effectiveness; causes the removal of impediments; a true leader who serves.
- **Developers** — the members who create any aspect of a usable Increment each Sprint.
- **Scrum Team** — one Product Owner, one Scrum Master and Developers; no sub-teams or hierarchies; typically 10 or fewer.
- **Product Goal · Sprint Goal · Definition of Done** — the commitments of the Product Backlog, the Sprint Backlog and the Increment.
- **Time-box** — a maximum duration that is never extended.
- **Empiricism** — knowledge comes from experience and decisions are based on what is observed.
- **Transparency · inspection · adaptation** — the three pillars of empiricism, each making the next possible.
- **Acceptable limit · deviation** — a measurable tolerance agreed in advance · a measured result outside it.
- **Scrum values** — commitment, focus, openness, respect, courage (since 2016).
- **Impediment** — an obstacle to the team's progress that the Developers cannot remove themselves in reasonable time.
- **Anti-pattern** — a practice that looks reasonable but defeats the purpose of the rule it imitates.
- **Cross-functional** — together, the team has all the skills needed to create value each Sprint.

- **Self-managing** — the team decides who does what, when and how.
- **Communication paths** — n × (n − 1) ÷ 2 for a team of n people.
- **Round-robin rotation** — each turn moves the list by one place, so every member holds each accountability in turn.
- **Feedback date · final deadline** — the Sunday after the class, for written feedback · December 20, 2026, 23:59, for the graded version of every lab.
